Pia Ve Dahlen

PIA VE DAHLEN is a marine biologist, diver, underwater guide, professional bather, science fiction enthusiast and a firework of a communicator. Pia Ve Dahlen became the first to receive the Naturviterprisen from the Naturviterne. She received the award for her formidable efforts to promote natural scientific knowledge of the sea.

SELECTED TITLE BY NORLA - extensive translation grants available

Underwater Wounderland: A voyage of discovery through the sea, takes you on a journey down into the kelp forest, to the precipitous sides of underwater volcanoes, down into the crushing, pitch-black depths and into the beating heart of the globe

As a child, Pia Ve Dahlen spent hours lying on the jetty marvelling at the life in the sea beneath her. With the aid of her grandfather's field microscope and nature guide, she explored nature above and beneath the waves. And every new thing she learned prompted new questions.

Her curiosity grew into a passion to understand how life developed in the vast oceans that provide 99 per cent of the area in which animal life can live on our planet. The sea is where life began, and the species there have evolved under totally different conditions to land-based animals.

In Underwater Wonderland: A voyage of discovery through the sea, you'll read about the beautiful, intelligent and awe-inspiring marine animals that have resulted from the experiments of evolution.

'(...) shows us the remarkable diversity of the ocean (...) the tone is light and cheerful, and it is sheer fun to read Pia Ve Dahlen's unique blend of detailed expert knowledge, meme- and popular culture-based humour, and bubbling enthusiasm. "A lively and extremely cool slice of popular science capable of making even the most confirmed couch potato see nature with new eyes. A necessary book.'
